

Evidence changes when the evaluation regime changes

Accepted VLF repair milestones show measured progress, while independent construction and fidelity transfer bound the claim.

A Database-repair acceptance frontier · VLF

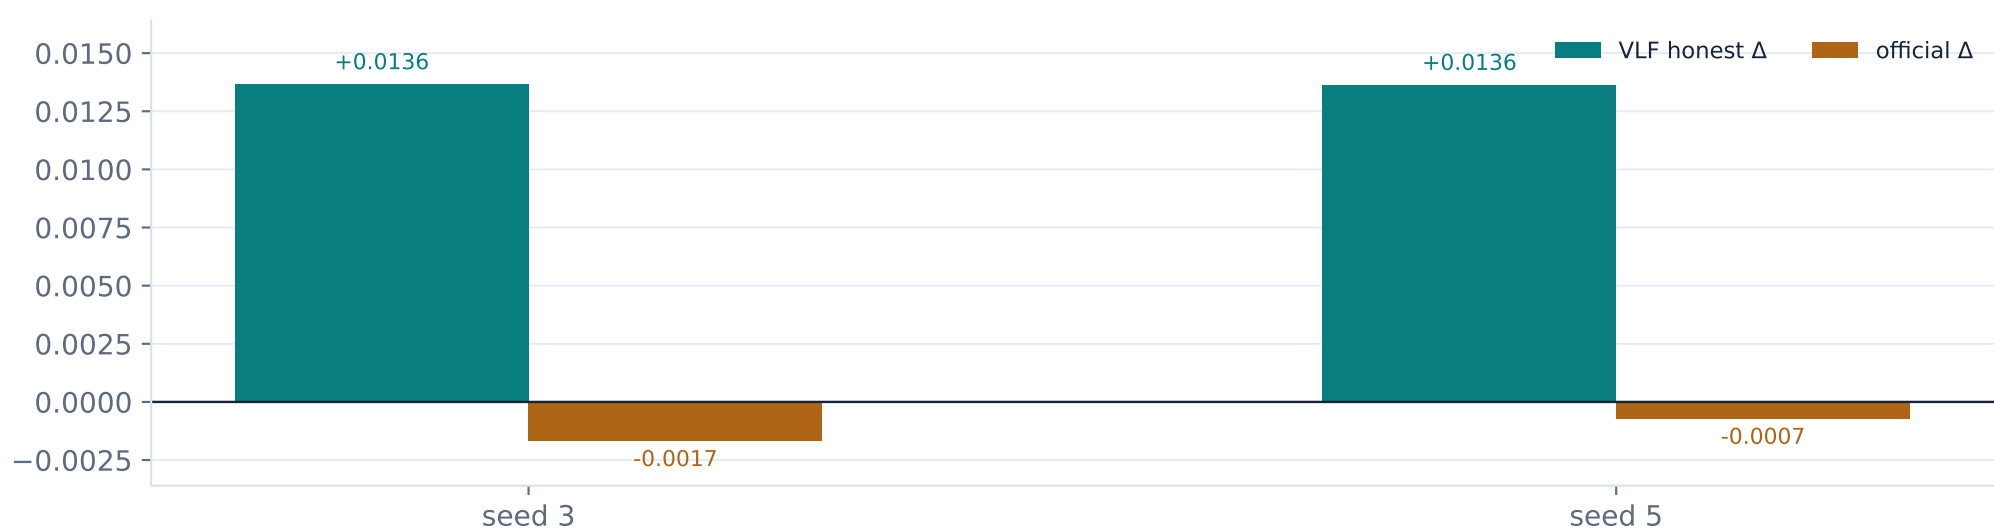

B Unaided construction stayed outside the gate

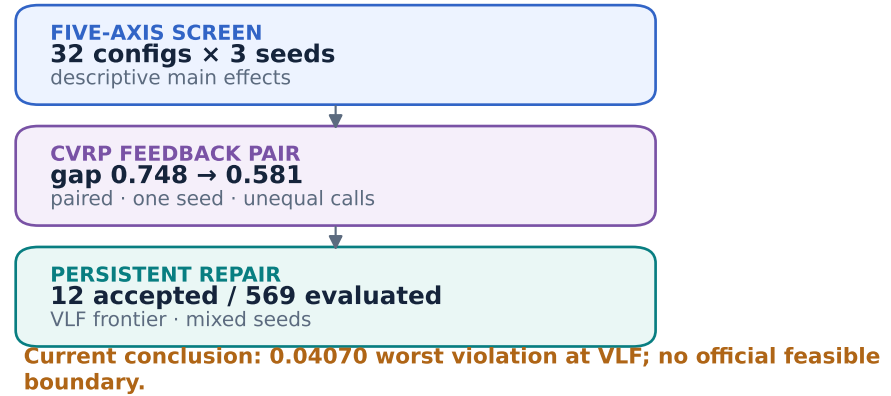

Accepted points may switch among imported or self-generated seeds; the line is a campaign frontier, not one boundary lineage.

C Two high-order transforms gained at VLF and reversed officially

Independent structural census: 0 promotable / 35 evaluated (33 failed).

D What each study can support

Current conclusion: 0.04070 worst violation at VLF; no official feasible boundary.

Within-case fidelity audit. It supports a resolution artifact for these transforms; it does not estimate a general treatment effect.
